Black Diamond Video Is First to Market with Pre-Op Serenity™

Point Richmond, California, September 23, 2014 – Black Diamond Video (BDV) today announced the release of Pre-Op Serenity™, an integrated solution that promotes surgical patient relaxation through calming audio and video.

Black Diamond Video's Pre-Op Serenity is a new feature of the company's Integrated Digital Surgical Suite (IDSS), an all-digital video routing and display solution for operating rooms. With Pre-Op Serenity, clinicians can play movies, calming nature videos, and other media on high-definition displays mounted within the OR. Pre-Op Serenity calms nervous patients and provides them a welcome distraction during surgical preparation.

Black Diamond Video's Pre-Op Serenity Allows Clinicians to Display Relaxing Video in the OR

“Black Diamond Video tailors each of its products and features to address key issues in today’s ORs,” said Edward Priest, Founder and CEO of Black Diamond Video. “We developed Pre-Op Serenity to help relax patients before their procedures, a need we have identified for all surgical specialties but particularly in pediatrics.”

Black Diamond Video’s Pre-Op Serenity feature is easily triggered by surgical staff through the touch of a button but can also be configured to start automatically as a patient is wheeled into the OR. Integrated Digital Surgical Suites equipped with Pre-Op Serenity have been well received by medical institutions seeking a simple-to-use video integration system to support the delivery of exceptional patient care.

About Black Diamond Video, Inc.

Black Diamond Video is a leading manufacturer and integrator of high-resolution digital video processing solutions for mission-critical medical, federal and commercial applications. The company manufactures a complete product line of 4K matrix switches, processors, scalars, signal conditioners, converters, extenders, system controllers, digital recorders, and H.264 streaming and conferencing technology.
